

VALTORC V-PORT BALL VALVE SERIES 950

This bulletin covers the 1- through 2-inch, 3- through 12-inch Series, and the 14- through 20-inch Valtorc V-Port Ball Valve Series. The V-Port Ball Valve combines globe valve ruggedness with the efficiency of a rotary valve. A shearing action between the V-Port ball and the ball seal promotes smooth, non-clogging operation. The unrestricted straight-through flow design provides high capacity for gas, steam, liquids, and fibrous slurries.

The Valtorc V-Port Ball Valves mate with a variety of ASME raised face flanges, as well as with DIN flanges (see Specifications).

To meet specific application requirements, a variety of metal and soft ball seal materials are available. A splined drive shaft combines with a variety of power operated and manual actuators to provide reliable, high-performance throttling or on-off operation for many different applications in the process industries.

Unless otherwise noted, all NACE references are to NACE MR0175-2002.

Specifications

Valve Sizes and End Connection Styles

Design: 1.-12-inch, flanged valves that mate with Class 150 raised-face flanges (see table 1). Also, sizes 3 through 12-inch mate with DIN PN classes

Valtorc V-Port Ball Valves: 20-Inch: Flanged raised-face valves. 14 and 16-inch valves are available in ASME B16.10 Short, face-to-face dimensions only

Maximum Inlet Pressures⁽¹⁾

Valtorc V-Port Ball Valves, CF3M (316L Stainless Steel) or CG8M (317 Stainless Steel) Valves: Consistent with Class 150, pressure-temperature ratings per ASME B16.34 or with DIN pressure-temperature ratings shown in table 1 but do not exceed the material temperature capabilities shown below or the pressure drop limitations. CF3M is available in all areas and is the standard material offering in Europe.

Maximum Shutoff Pressure/Temperature Ratings⁽¹⁾

Composition Flat Metal (3- through 12-inch valves only), HD and High Temperature HD Metal Ball Seals and Flow Ring:

Shutoff Classification⁽¹⁾

Ultra Ball Seal (Forward Flow):

Class VI per ANSI/FCI 70-2 and per IEC 60534-4,

Flat Metal Ball Seal for 3 through 12-inch valves only (Forward Flow): Class IV per ANSI/FCI 70-2 and per IEC 60534-4,

HD (Heavy Duty) Metal Ball Seal (Bidirectional Flow): 0.01% of valve capacity; Class IV per ANSI/FCI 70-2 and IEC 60534-4; Maximum allowable pressure drop in reverse flow is 6.9 bar (100 psi);

High Temperature HD (Heavy Duty) Metal Seal (Bidirectional Flow): Class III per ANSI/FCI 70-2 and IEC 60534-4

Flow Ring Construction (Bidirectional Flow): 5% of valve capacity at full travel

Temperature Capabilities^(1,2)

Composition Seals: -46 to 232_C (-50 to 450_F)

HD Metal Seals: -46 to 288_C (-50 to 550_F)

High Temperature HD Metal Seal: 288 to 427_C (550 to 800_F).

Ceramic Ball: -46 to 93_C (-50 to 200_F)⁽⁴⁾.

Flow Ring or Flat Metal Seal : -198 to 425_C (-325 to 800_F)

PEEK/PTFE Bearings: -198 to 260_C (-325 to 500_F)

Packing Constructions

PTFE V-ring: -198 to 232_C (-325 to 450_F)

Graphite: -198 to 538_C (-325 to 1000_F)

PTFE V-ring: -46 to 232_C (-50 to 450_F)

Graphite: -7 to 316_C (20 to 600_F)

Flow Characteristic

Modified equal percentage

Specifications (continued)

<p>Optional Face-to-Face Dimensions ASME B16.10 short face-to-face dimensions are available as an option for 1- through 12-inch valves. Note that ASME B16.10 short dimensions are actually longer than ISA S75.04.</p> <p>Standard Flow Direction Forward (into the convex face of the V-notch ball)</p> <p>Maximum Ball Rotation 90 degrees</p> <p>Actuator Mounting Standard valve construction is for right-hand</p>	<p>mounting, as viewed from upstream end of valve. Left-hand (optional) mounting is available upon request.</p> <p>Valve/Actuator Action With diaphragm or piston rotary actuator, the valve is field-reversible between PDTC or PDO: push-down-to-close (extending actuator rod closes valve) and push-down-to-open (extending actuator rod opens valve)</p>

Features

Trim Versatility—Trim components are interchangeable. This feature allows you to reduce your spare parts inventory and maintenance procedures. The seal assembly can be changed without removing the actuator or without removing the ball from the valve body.

Easy Installation—Flanged body design of the V-Port Ball Valves eliminates exposed line flange bolting, reduces alignment and installation time, and promotes secure valve installations and piping integrity.

Application Versatility—The valves are available with ISA S75.04 and IEC 534-3-2 face-to-face dimensions as a standard construction, and optional ASME B16.10 short face-to-face

dimensions. IEC 534.3.2 face-to-face dimensions are equivalent to S75.04 face-to-face dimensions.

Long Service Life—The solid HD metal seal (figures 2 and 3) construction provides long service life in demanding applications. The constant wiping action of the seal across the ball's sealing surface prevents scale and sludge buildup, and provides excellent service on steam, gases, slurries, and various liquid applications.

Smooth Valve Operation—Precision machined parts and pressure balanced seal designs allow smooth, precise movement of the ball.

Excellent Flow Control—Precise contouring of the V-Port Ball Valves provides a modified equal percentage flow characteristic.

1. Inlet flange stud bolt length is longer than the standard length specified in ASME B16.5. See dimension M below.
 2. 14- and 16-inch valves are available in ASME B16.10 short, only. See dimension A for ASME B16.10 short shown in figure 9.
 3. Clearance necessary to remove flange bolts.
